

Tutorial Section for using MS Word Equation Inserts for displaying logic operations

By Caner Mutlu

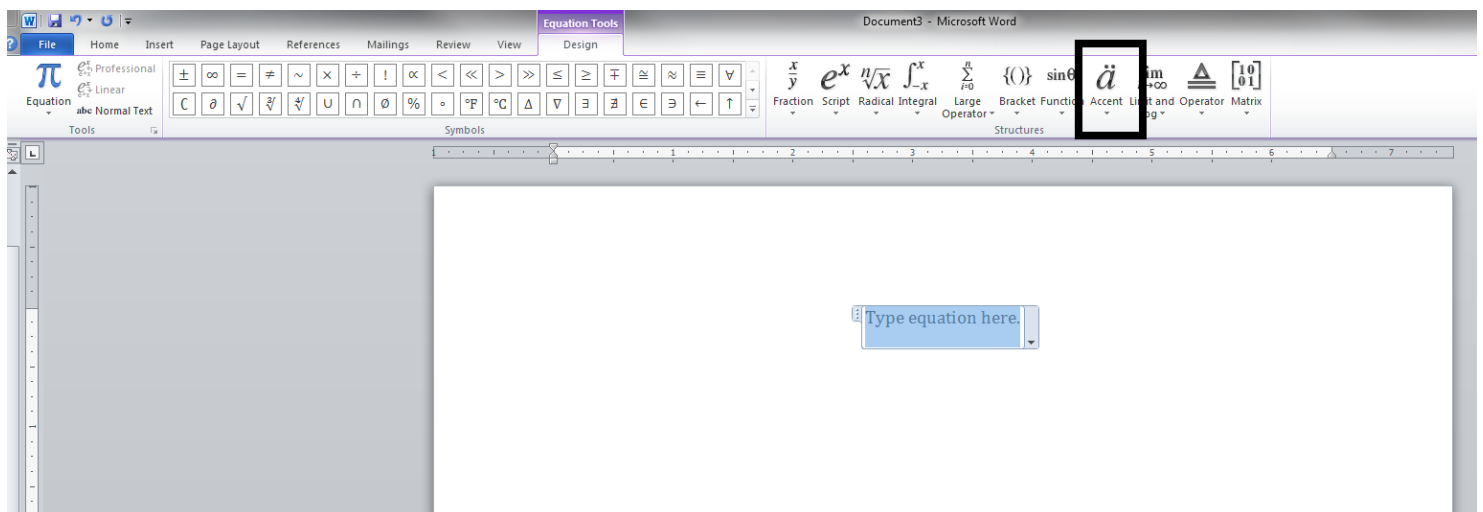

- 1) Open a MS word document
- 2) Select Insert tab on top. (Please see the marking on the bottom picture)

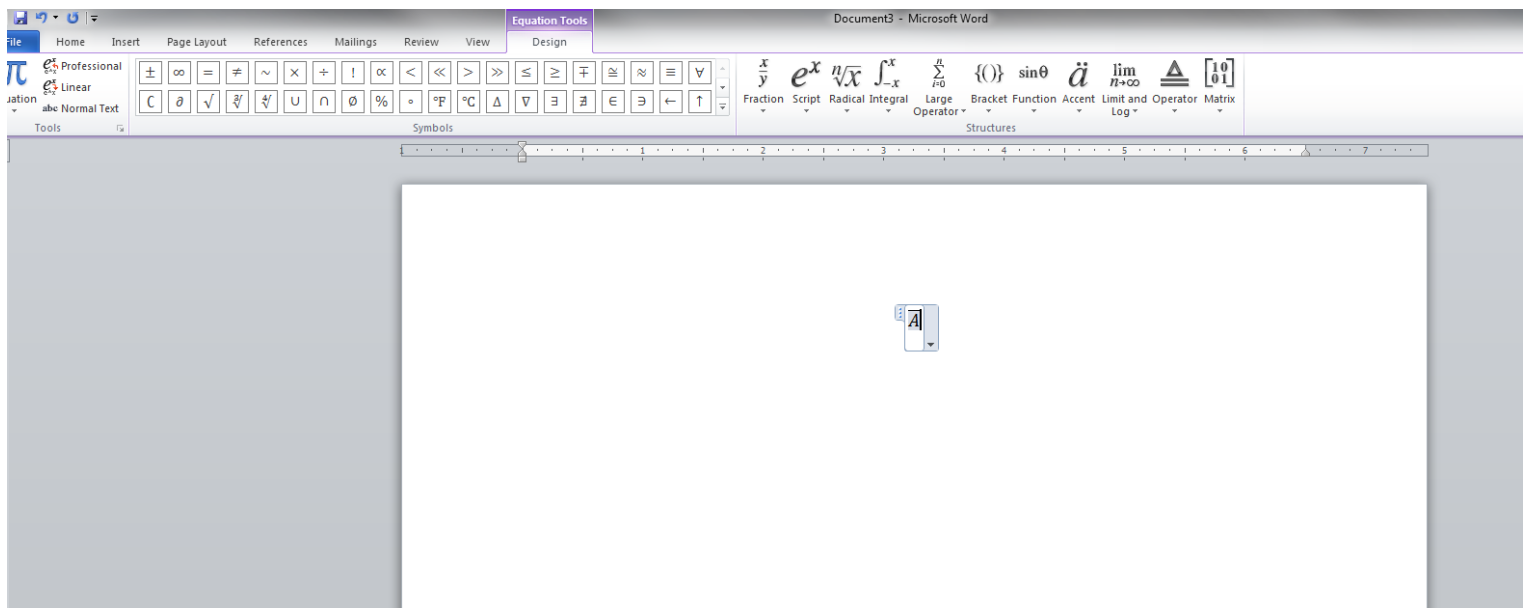

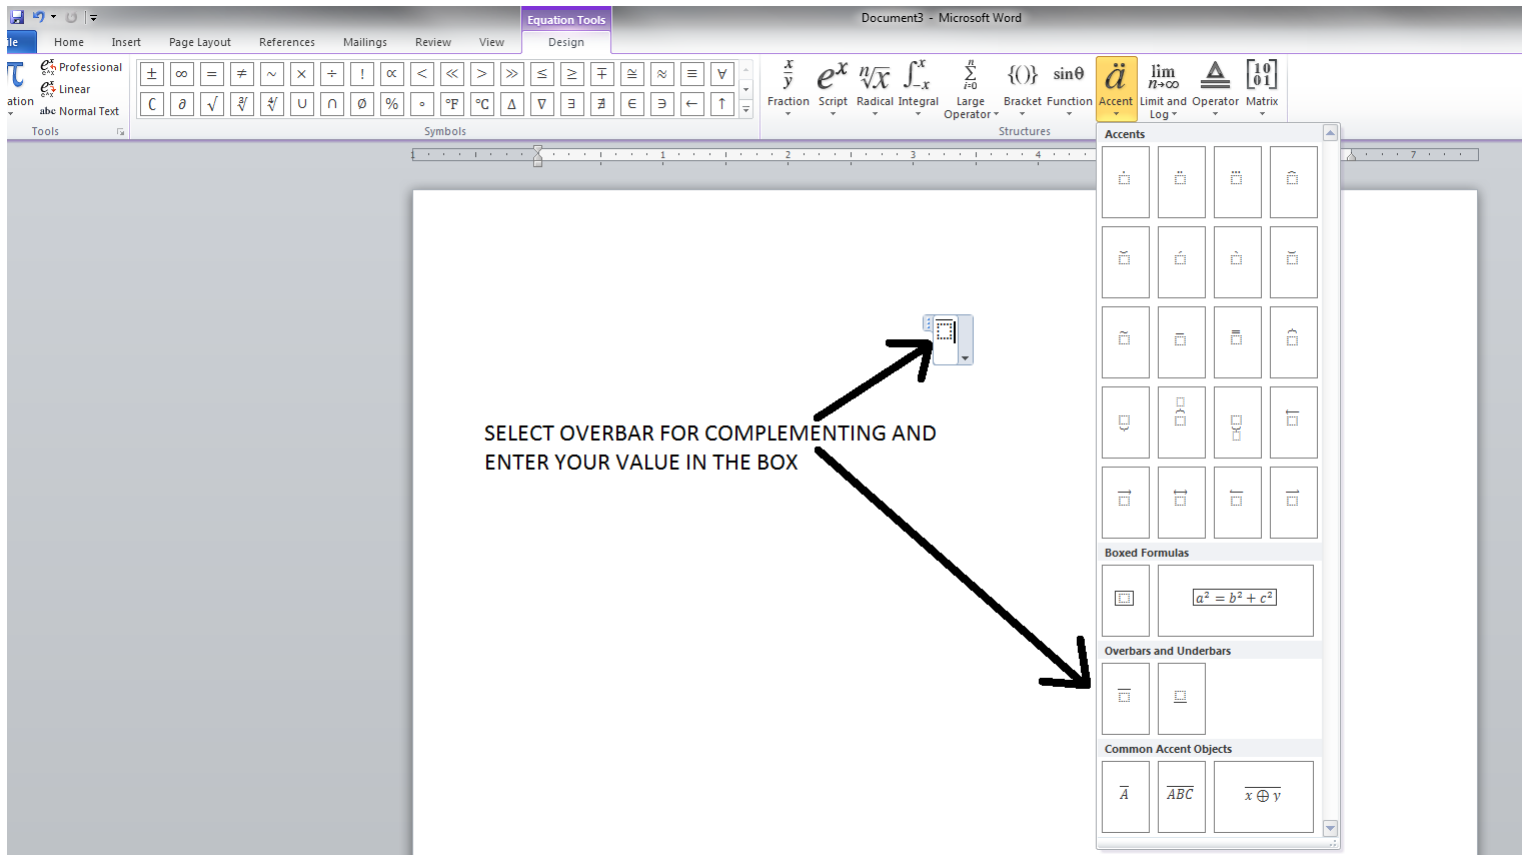

- 3) Click on Equation button on Insert tab (Please see the marking on the bottom picture)

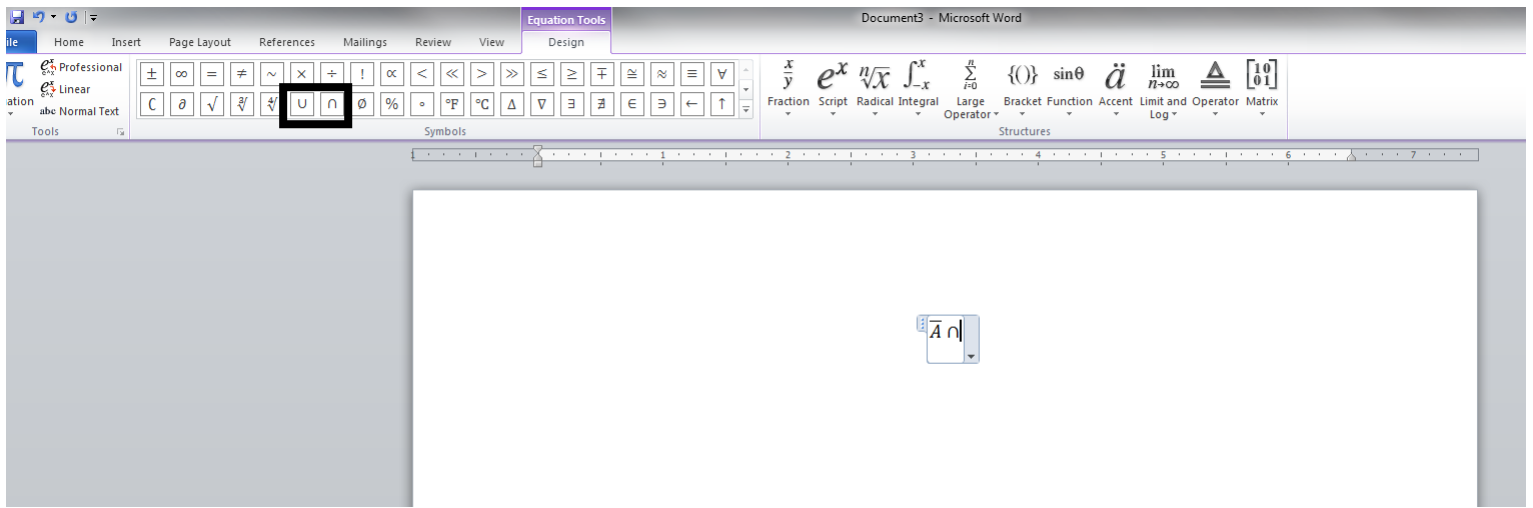

- 4) Click on Accent button on Insert tab (Please see the marking on the bottom picture)

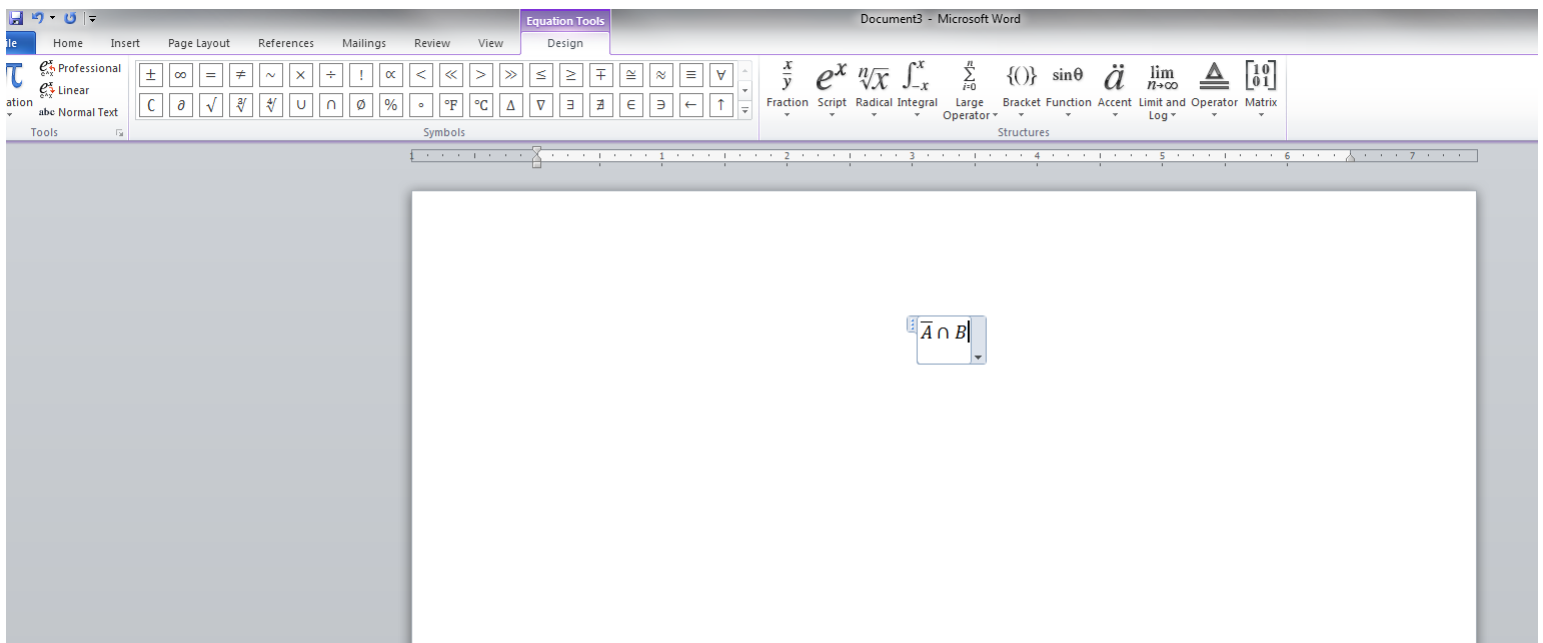

5) Select Overbars from the menu and enter your value (e.g. A) in the box (Please see the marking on the bottom picture)

6) Press on keyboard right arrow once to unselect the overbar box and click on intersection for AND operation or union for OR operation. In this case AND operation is selected. (Please see the marking on the bottom picture)

7) Enter your other value (e.g. B) (Please see the bottom picture)

8) In this case, **not A AND B** is displayed. Align text left. Press keyboard right arrow once more for unselecting equation box and continue typing (Please see the marking on the bottom picture)
